Ex no: 1	Install Virtual box/VMware Workstation with different flavours of linux or windows OS on top of windows7 or 8
Date:	

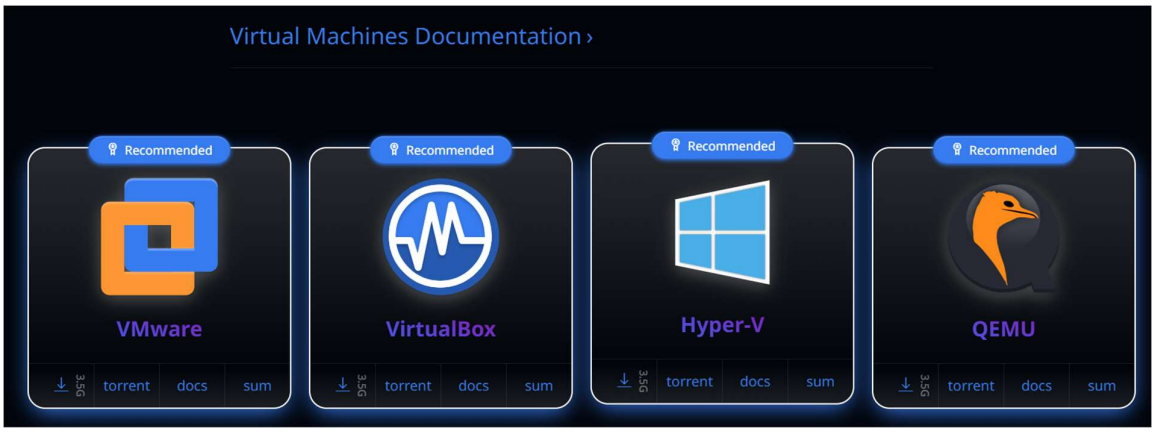
AIM:

To Install Virtual box/VMware Workstation with different flavours of linux or windows OS on top of windows7 or 8

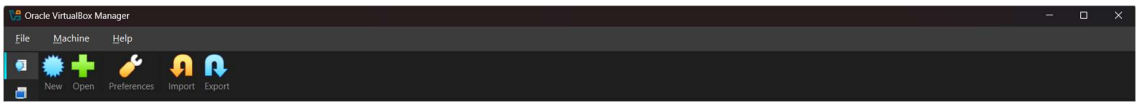
PROCEDURE:

Step 01: Download VirtualBox for the windows host

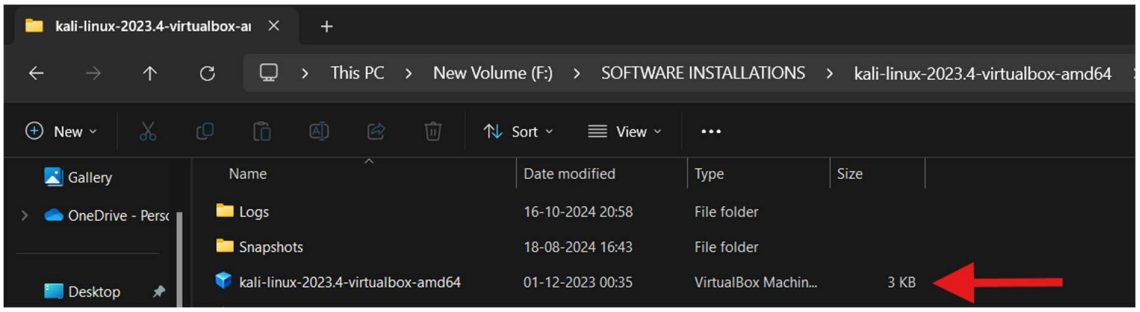
Step 02: Go to Kali.org scroll for pre-built VM and select VirtualBox.



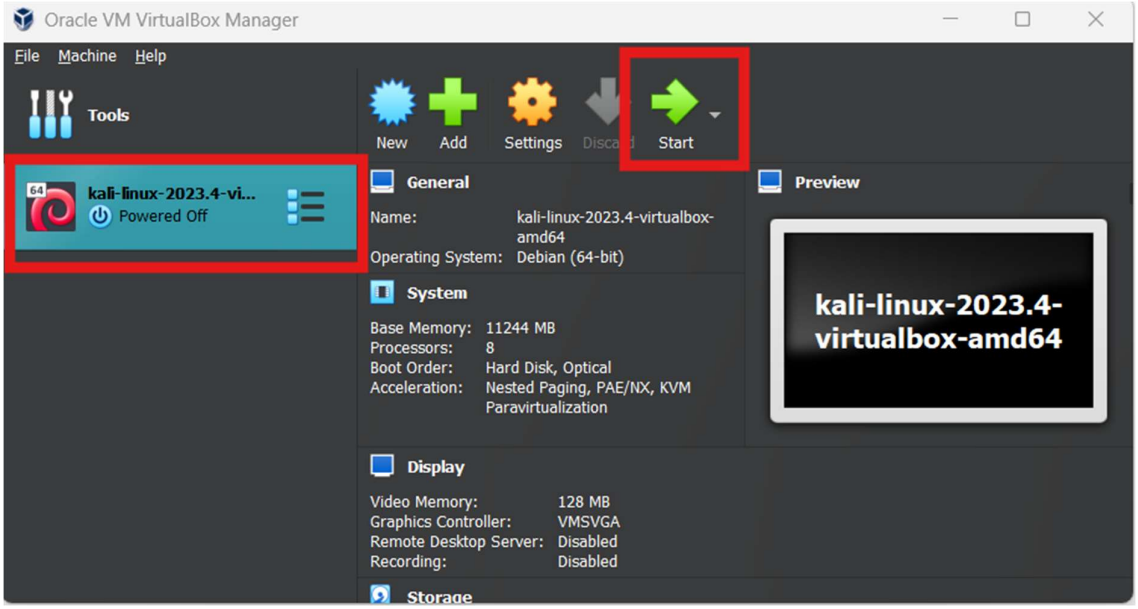
Step 03: Open VirtualBox Manager and select the Add button in the top menu.



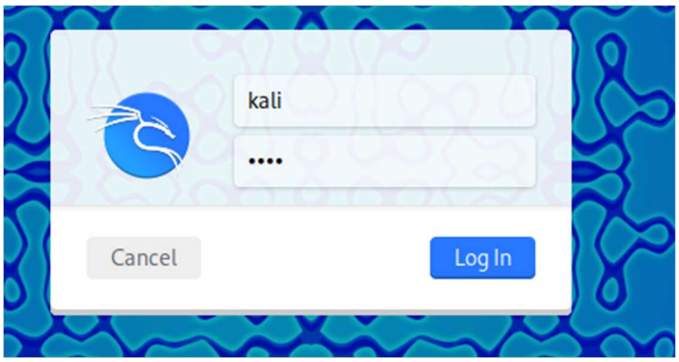
Step 04: Locate the virtual machine file you downloaded and unpacked. Double-click the file to open it.



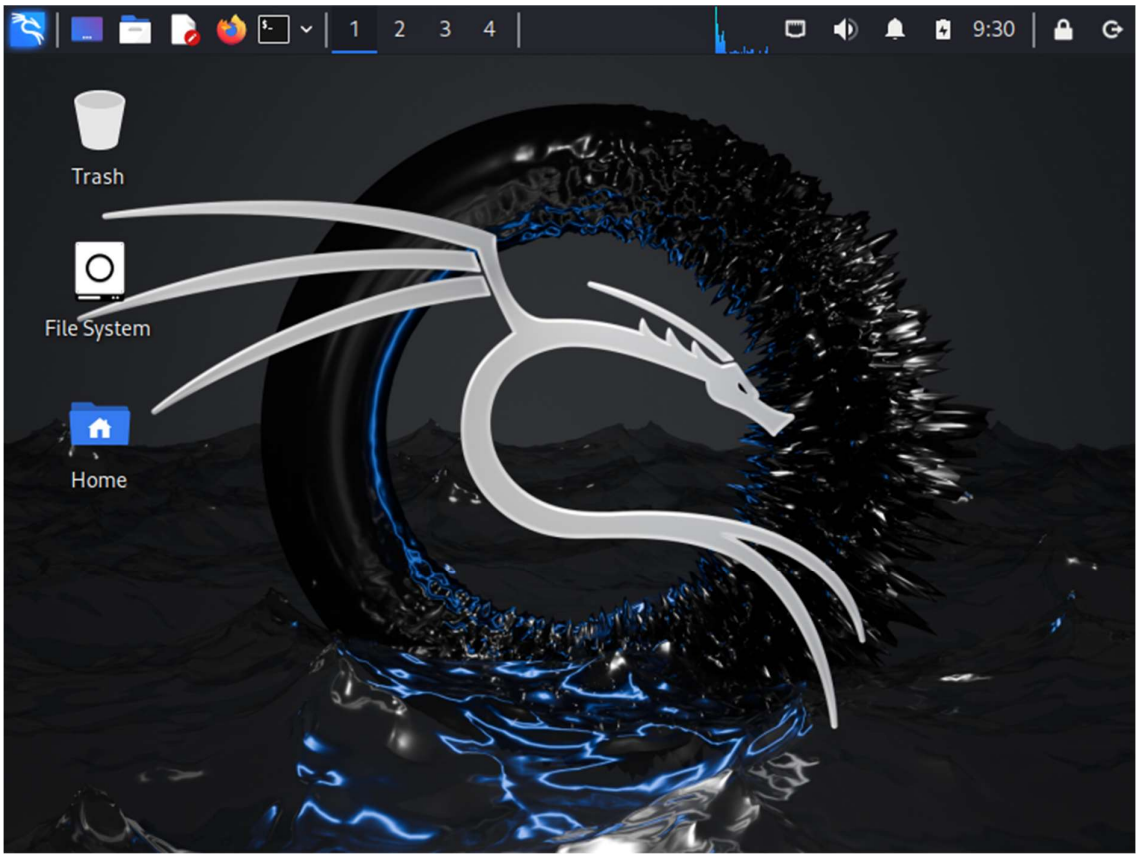
Step 05: Select the instance and click the Start button in the top menu.



Step 06: On the login screen, use **username kali** and **password kali** to log in.



Step 07: The Kali Linux desktop appears on the screen.



Result:

Thus we have successfully installed kali linux on virtual box via windows host.
