Ex. No: 9	Installation and Configuration of Computer Anti-Virus
Date:	

AIM

To install and configure an anti-virus software on a computer system to protect it from malware, viruses, and other security threats.

REQUIREMENTS

- Computer or Laptop
- Internet Connection
- Anti-Virus Software (e.g., Avast Antivirus / Quick Heal Total Security / Microsoft Defender Antivirus)

THEORY

An **Anti-Virus** is a security program designed to detect, prevent, and remove malicious software such as **viruses, worms, trojans, spyware, and ransomware**.

Anti-virus software provides features such as:

- **Real-time protection**
- **Malware detection**
- **System scanning**
- **Automatic updates**
- **Threat removal**

Regular updates help the anti-virus recognize **newly emerging threats**.

PROCEDURE

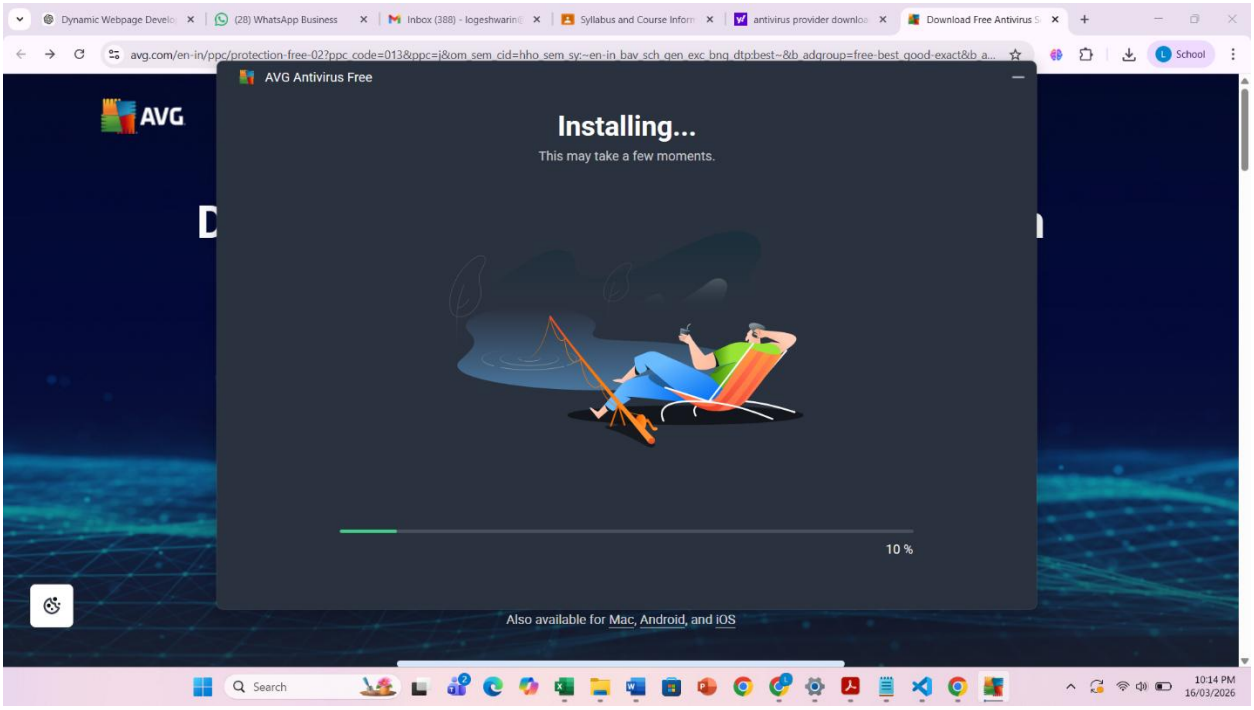
Step 1: Download Anti-Virus Software

1. Open a web browser.
2. Visit the official website of the antivirus provider.

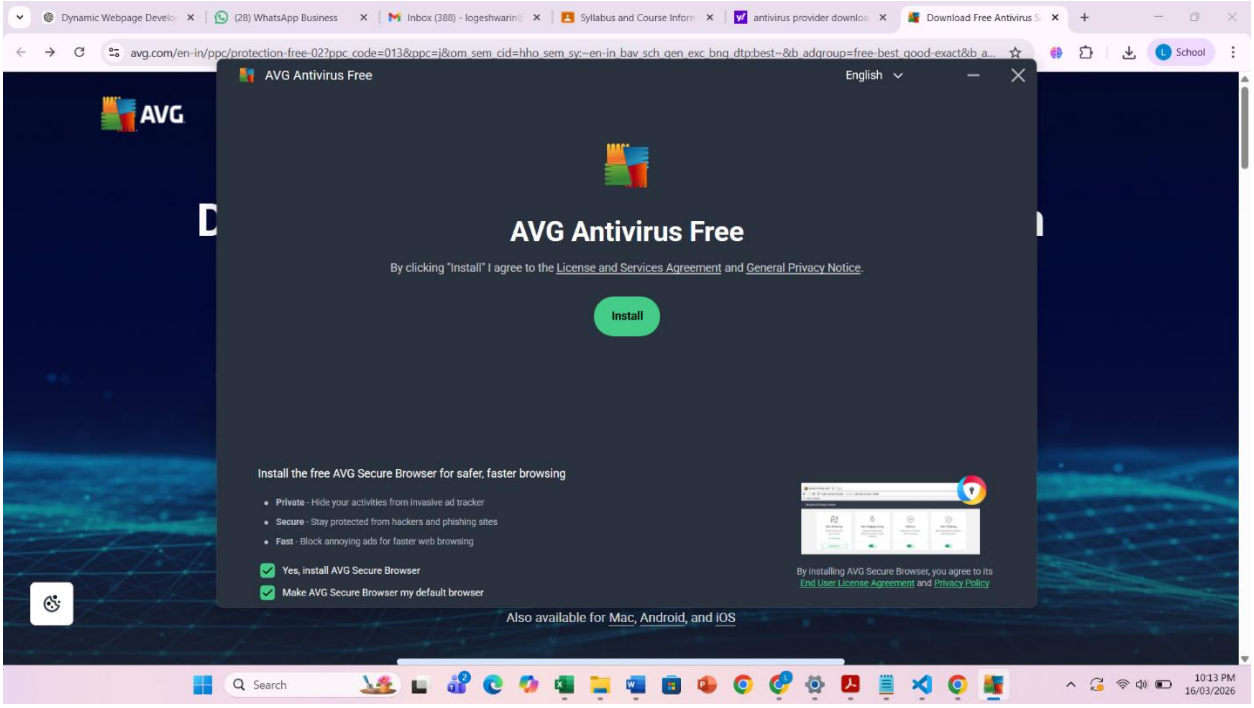
3. Download the latest version of the antivirus software

Step 2: Install the Anti-Virus

1. Open the downloaded **setup file**.
2. Click **Install**.



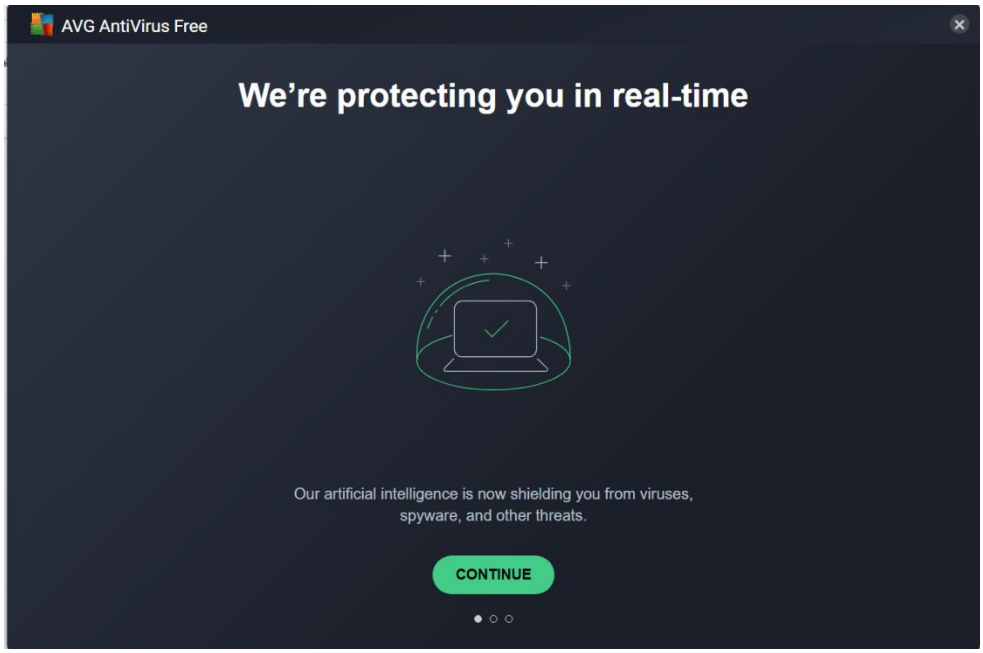
3. Accept the **license agreement**.



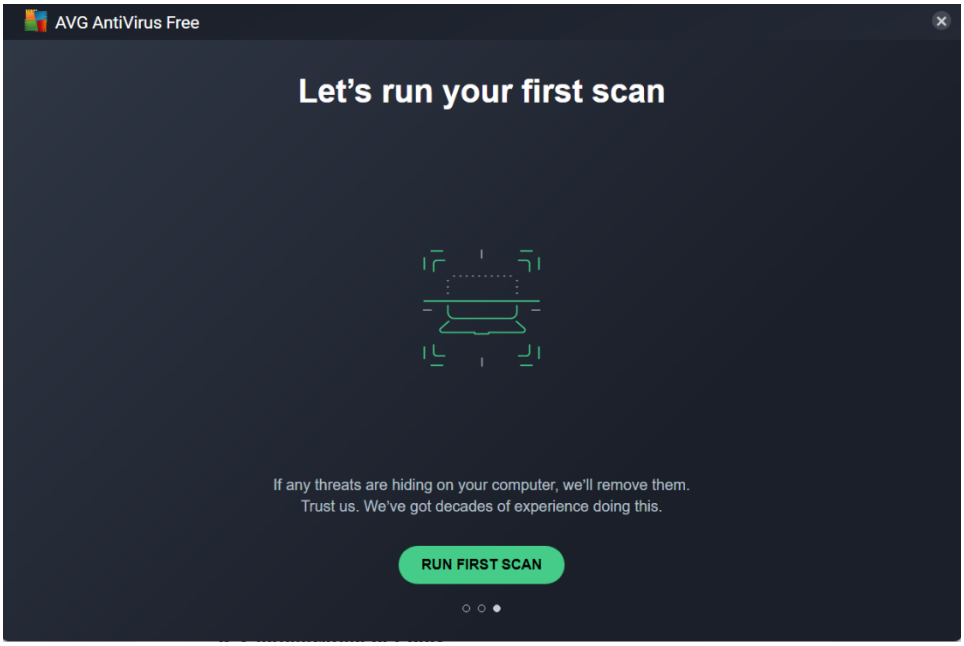
4. Wait for the installation process to complete.
5. Restart the computer if required.

Step 3 **Configure the Anti-Virus**

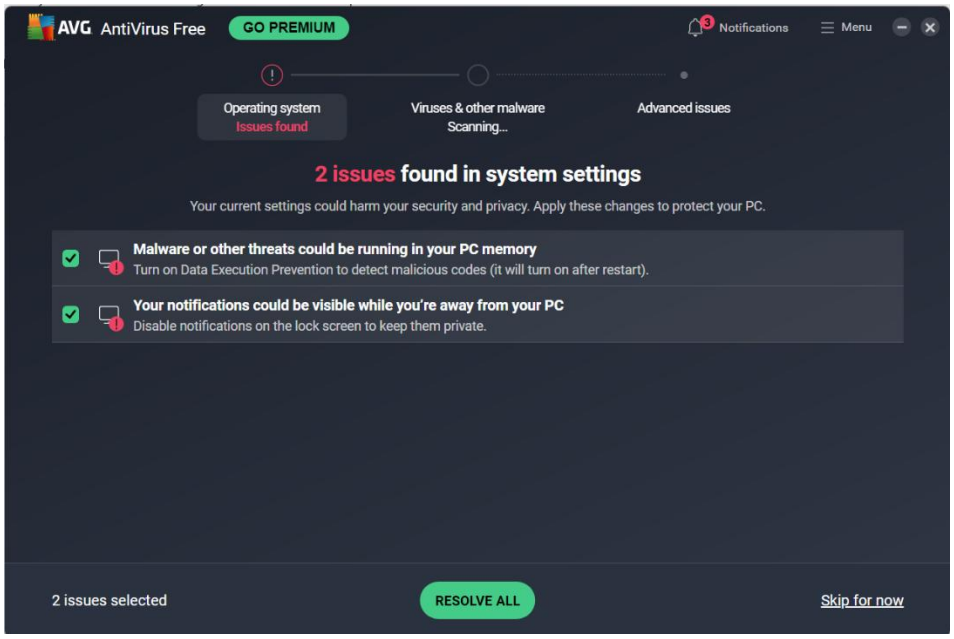
1. Open the installed antivirus software.
2. Enable **Real-Time Protection**.



3. Configure **automatic virus definition updates**.



4. Schedule **regular system scans** (daily or weekly).

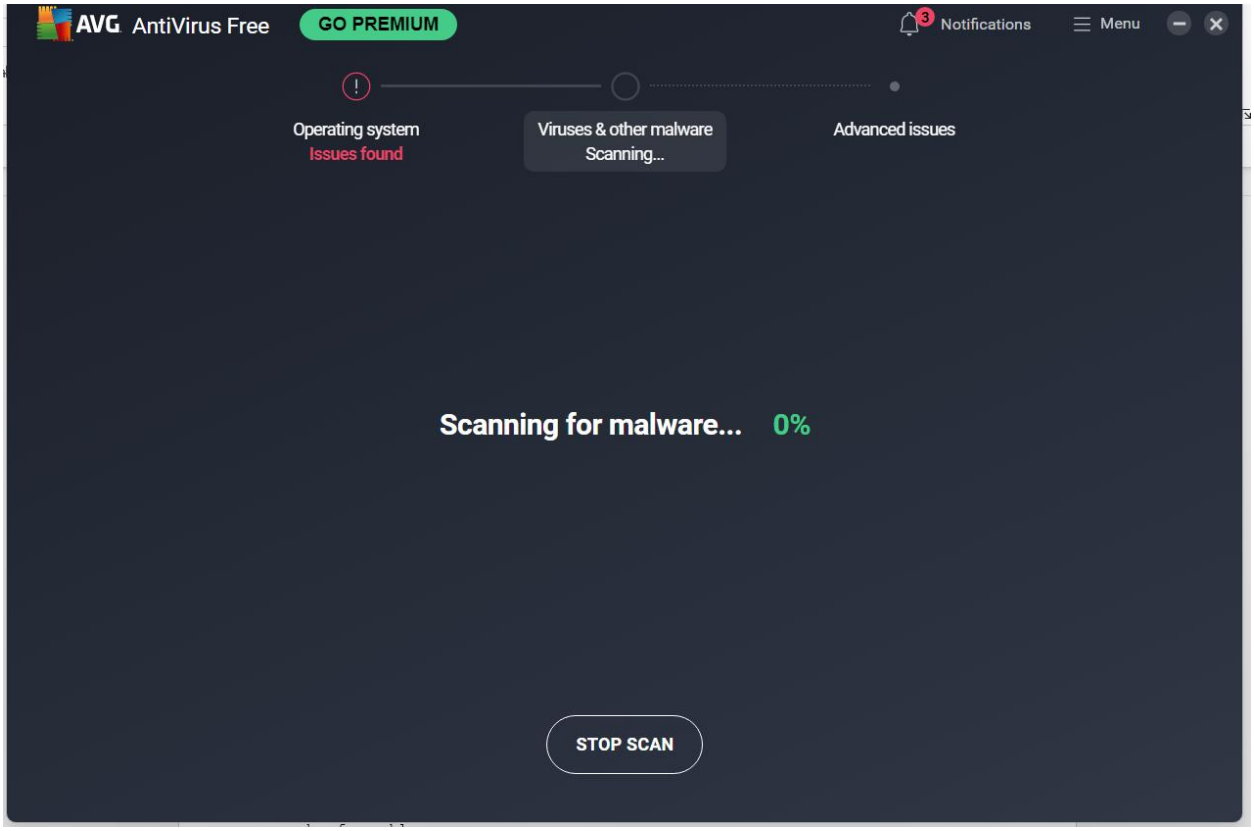


5.

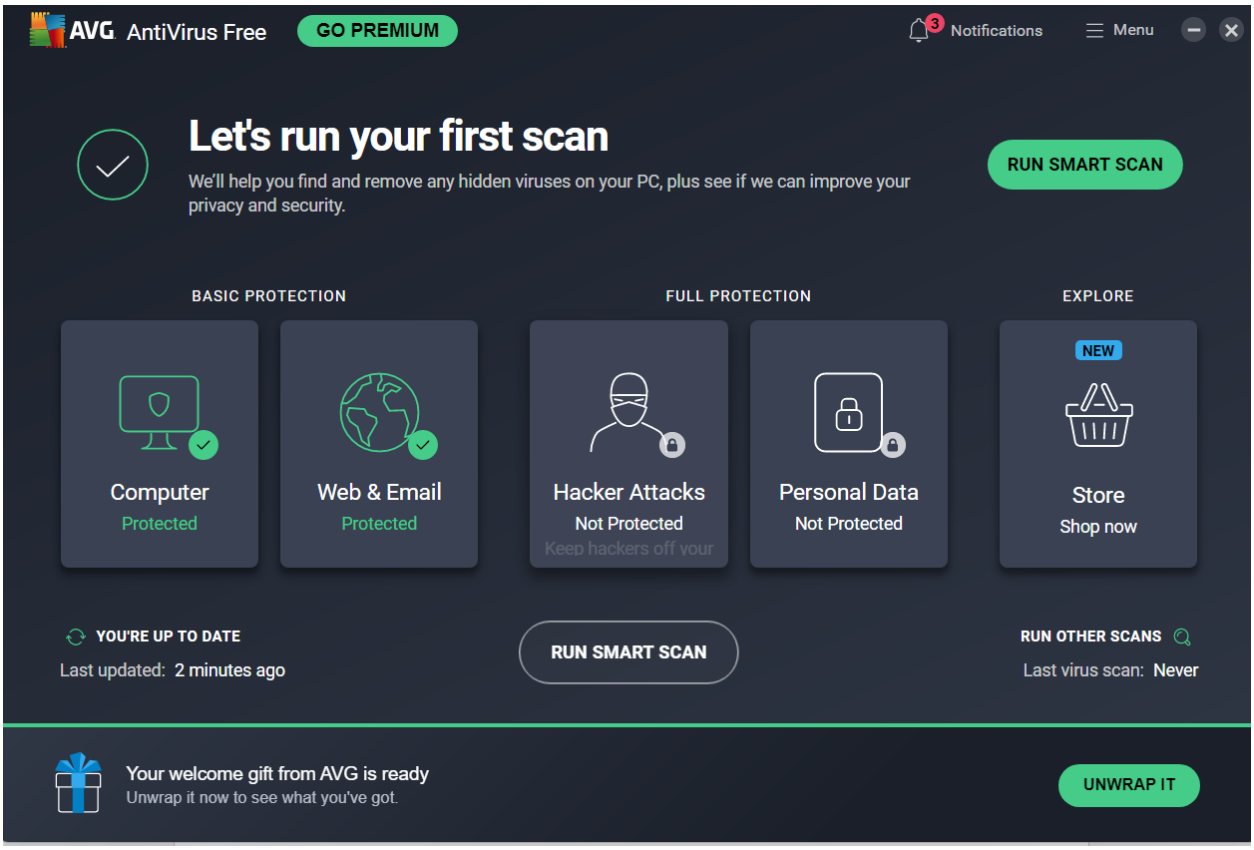
6. Enable **firewall or web protection** if available.

Step 4: Perform a System Scan

1. Select **Full System Scan**.



2. The antivirus scans all files and folders.



3. Detected threats are **quarantined or removed**.

Result

Thus, the **installation and configuration of computer anti-virus software** was successfully performed to protect the system from malware and security threats.
