EX: 5	Using Dork Engine, Google Hacking Database (GHDB), and Exploit Database for Information Gathering
DATE:	

AIM

To perform vulnerability and information gathering using **Google Dork Engine, Exploit-DB, and Hacking Databases** in order to identify publicly exposed resources, vulnerabilities, and exploit information available on the internet.

PROCEDURE:

Part A: Using Google Dork Engine

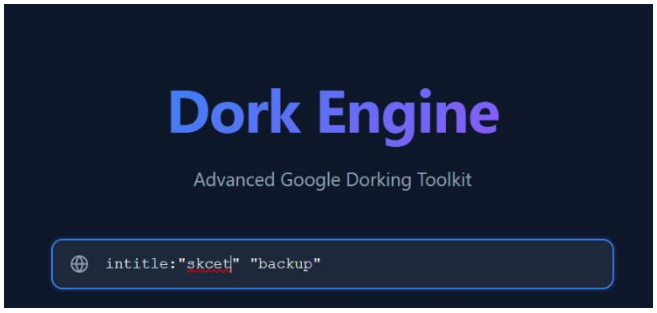
Step 1: Open a web browser in the system.
Step 2: Navigate to the Google search engine.
Step 3: Use advanced search operators (Google Dorks) to find sensitive files, directories, or login pages indexed by search engines.
Step 4: Enter different dork queries in the search bar.
Step 5: Observe the search results and identify exposed information.

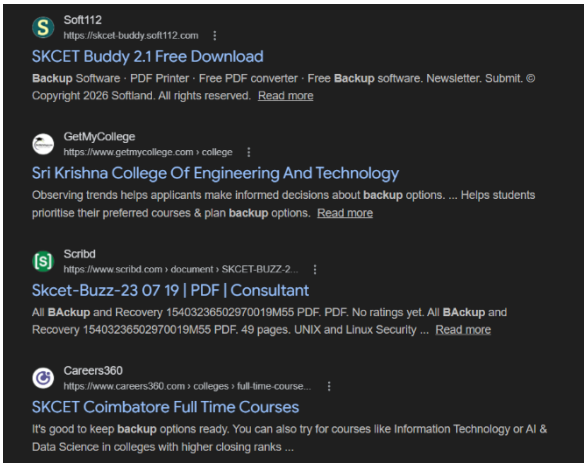
Commands:

1) filetype:pdf "<name>"

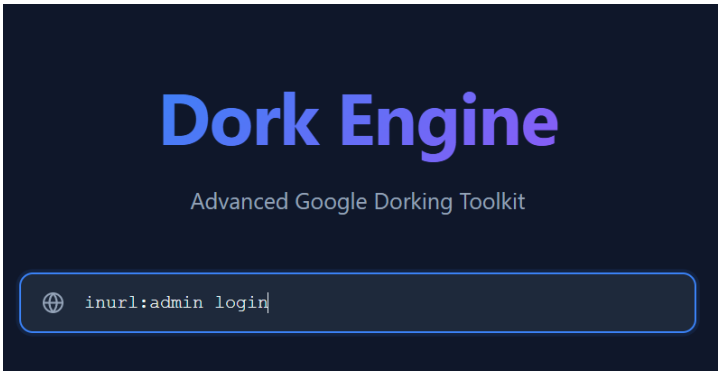
   Searches for publicly available PDF documents related to cyber security.

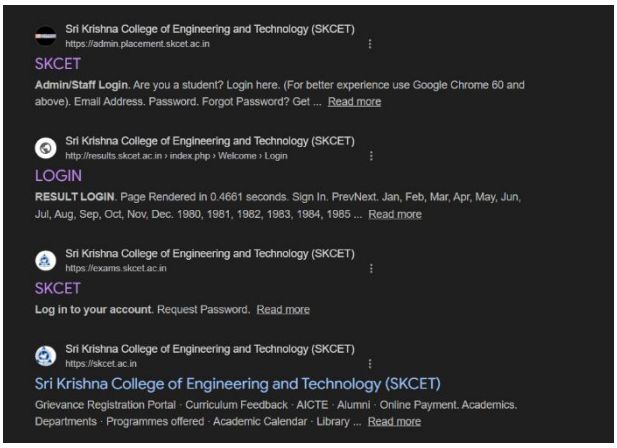
2) intitle:"index of" "backup"
Finds open directories containing backup files.



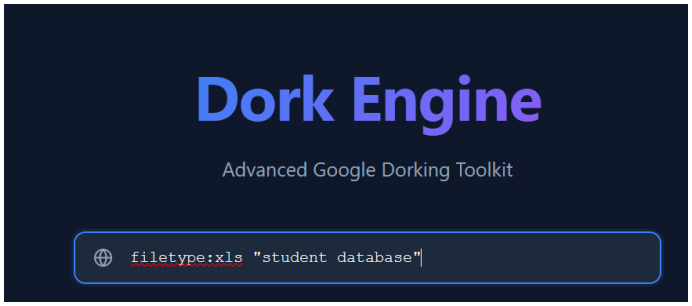


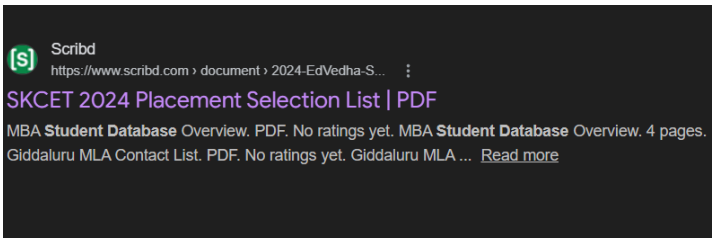
3) inurl:admin login
Searches for administrator login pages.



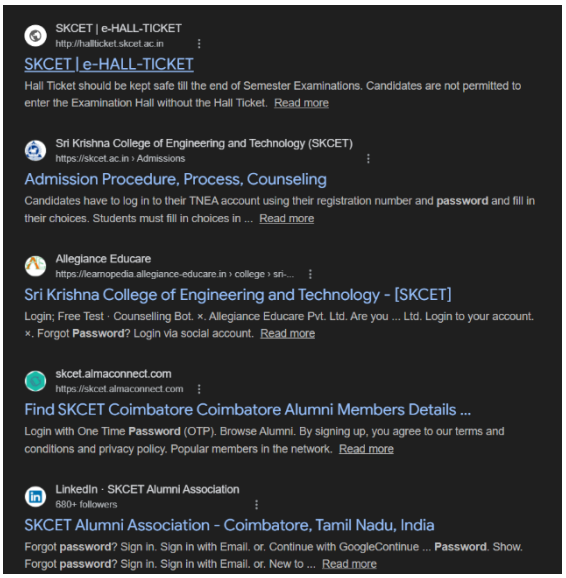


4) filetype:xls "student database"
Finds Excel files containing student database information.





5) intitle:"index of" password
   Finds directory listings that may contain password-related files.



Part B: Using Exploit Database
Step 1: Open Kali Linux terminal.
Step 2: Ensure Exploit Database is installed.
Step 3: Use the searchsploit command to search for vulnerabilities.
Step 4: Enter the software name in the command.
Step 5: Observe the exploit results displayed in the terminal.

Commands

1) searchsploit apache
   Searches for vulnerabilities related to Apache web server.

```
kali ../CTF/ONCE_MORE  v3.13.11  05:35  searchsploit apache
Exploit Title

Part C: Using Google Hacking Database (GHDB)

Step 1: Open a web browser.
Step 2: Visit the GHDB website.
Step 3: Select different categories of Google dorks.
Step 4: Copy the dork queries.
Step 5: Paste them into the Google search bar to analyze results.

Commands / Queries

1) filetype:sql "database"
   Searches for SQL database files available on the internet.

intitle:"database" "backup" filetype:sql

GHDB-ID:	Author:
7660	ONKAR DESHMUKH

Published: 2021-11-08

Google Dork Description:

intitle:"database" "backup" filetype:sql

Google Search: intitle:"database" "backup" filetype:sql

```
# Google Dork: intitle:"database" "backup" filetype:sql
# Files Containing Juicy Info
# Date:6/11/2021
# Exploit Author: Onkar Deshmukh
```

Result:
Information gathering was successfully performed using **Dork Engine, Google Hacking Database (GHDB), and Exploit Database**. The queries helped identify publicly indexed files, open directories, login pages, and potential vulnerabilities available on the internet. This experiment demonstrates how search engines and security databases can assist in reconnaissance and vulnerability identification.
