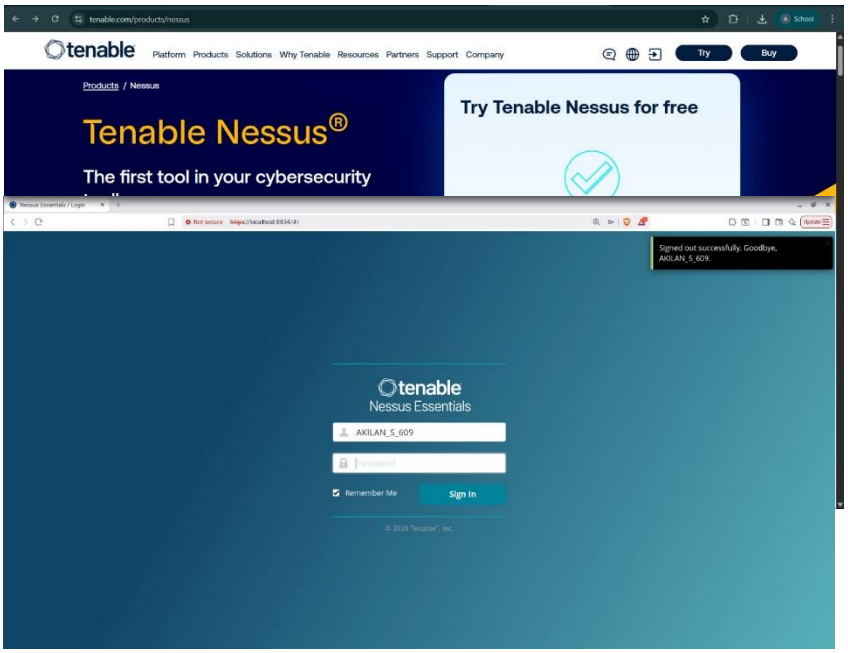
EX. NO: 8	SCAN THE TARGET USING TOOLS LIKE NESSUS
DATE:	

AIM:

To perform a basic vulnerability scan on a target system using the Nessus and identify possible security vulnerabilities.

PROCEDURE:

1. Install the Nessus vulnerability scanner from the official website of Tenable.

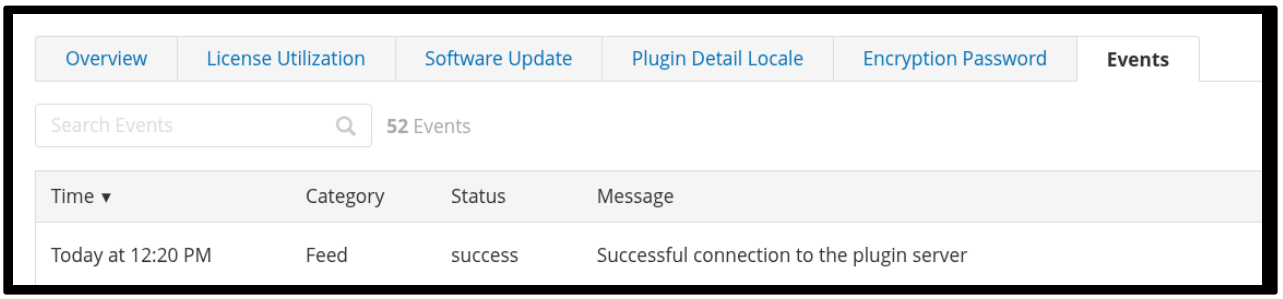


2. Start the Nessus service and open the web interface in a browser using the address: https://localhost:8834

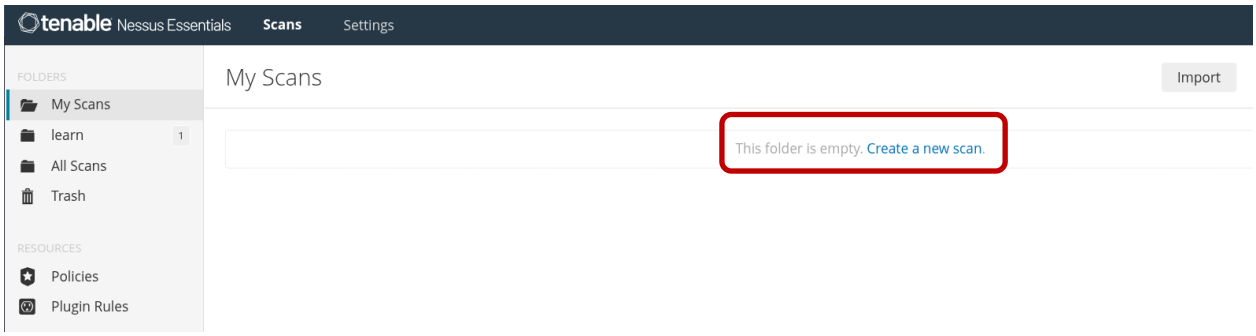
3. Create a username and password to log into the Nessus dashboard.

4. Activate Nessus Essentials by registering with an email and entering the activation co de.

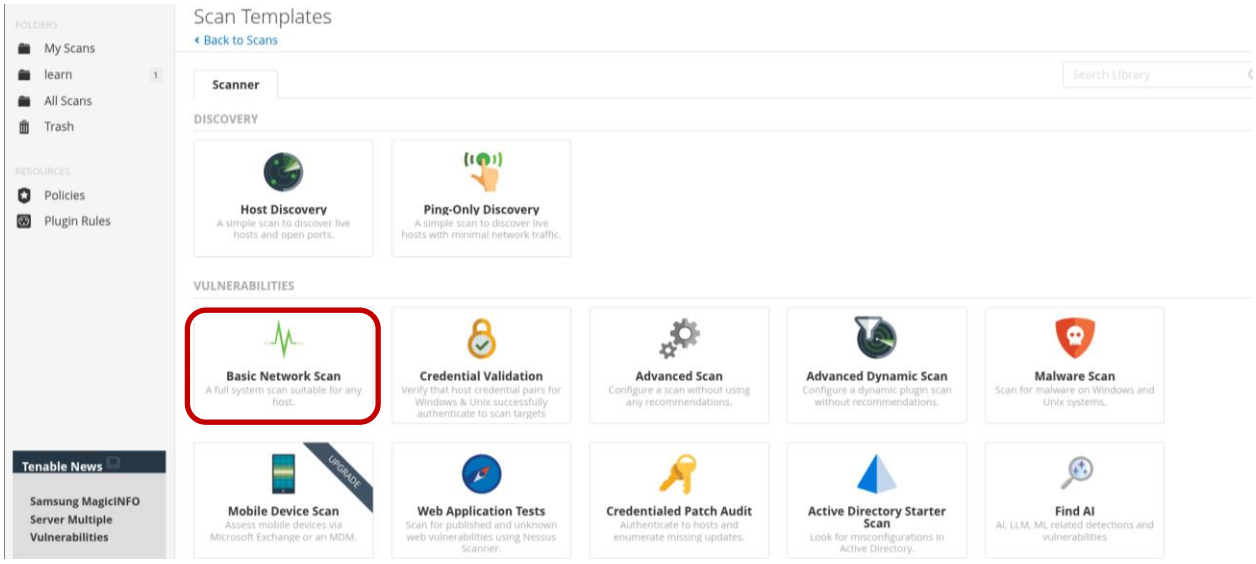
5. Wait until the Nessus plugins are downloaded and updated.



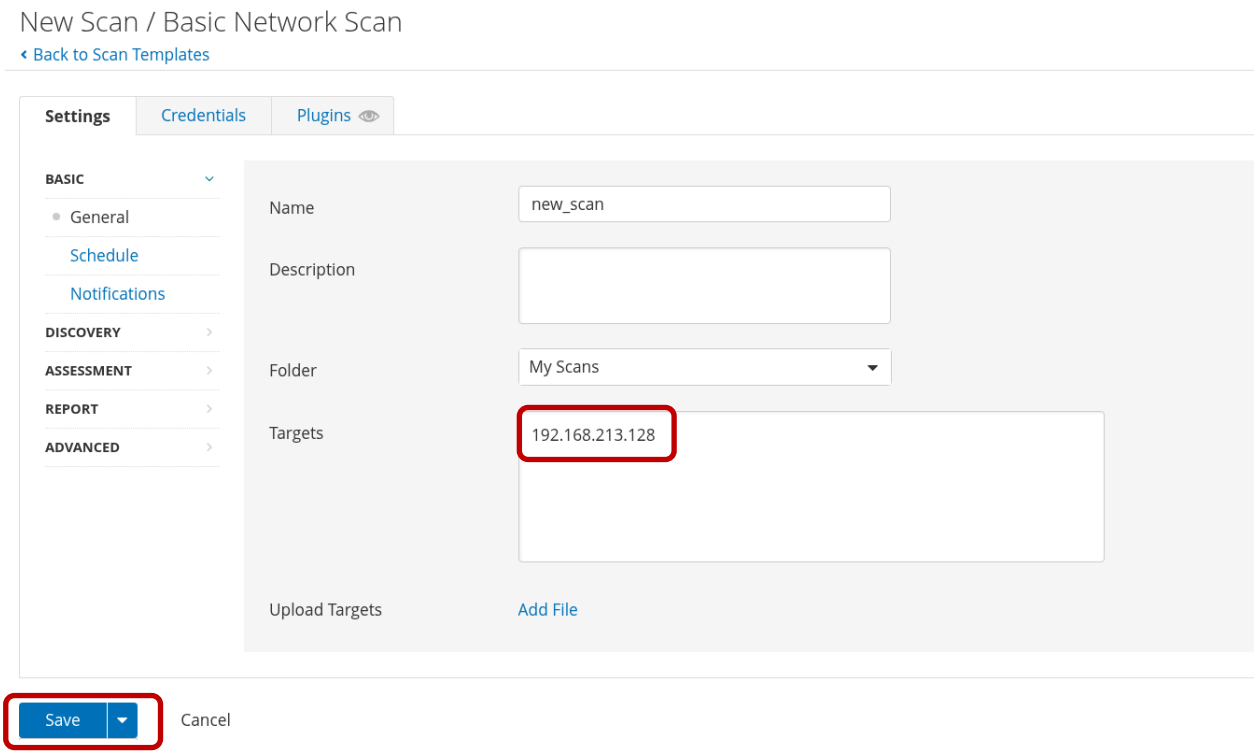
6. After login, click New Scan on the dashboard.



7. Select Basic Network Scan from the available scan templates.



8. Enter the scan details:
    - Name: Basic Vulnerability Scan
    - Description: Scan to detect vulnerabilities in the target system
    - Target: Enter the IP address or domain name of the system to be scanned.



9. Save the configuration and click Launch to start the scan.
10. Monitor the scan progress until the status changes to Completed.
11. Click on the completed scan to view the detected vulnerabilities.
12. Analyze the vulnerabilities categorized as Critical, High, Medium, Low, and Informati onal.
13. Export the scan report if required.

OBSERVATIONS:

During the scan, the following details were observed:

PARAMETER	OBSERVATION
Scan Type	Basic Network Scan
Target IP/Host	192.168.213.128
Scan Status	Completed
Vulnerabilities Detected	Medium
Example findings	Open ports, Outdated software, Weak configuration

The Nessus scanner identified potential vulnerabilities in the target system and provided detai led descriptions along with recommended solutions.

RESULT:

The basic vulnerability scan was successfully performed using the Nessus. The scanner detect ed various vulnerabilities in the target system and provided detailed information about their s everity and remediation steps, helping to improve system security.
