EX: 6	Aggregates information from public databases using online free tools like Maltego.
DATE:	

AIM:

To collect and analyze publicly available information using **Maltego software (Windows application)**.

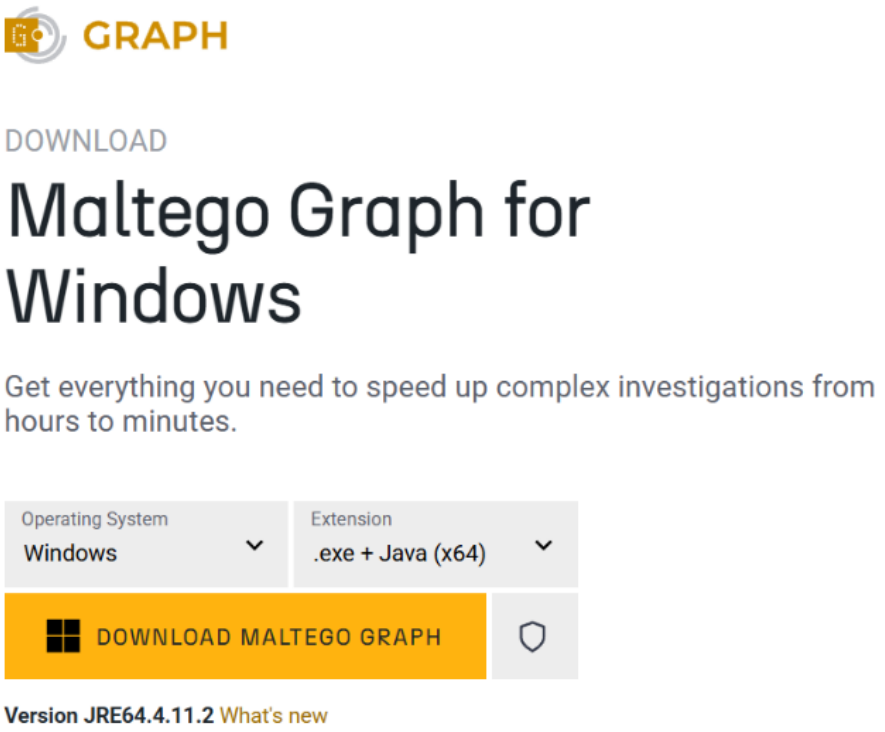
TOOLS REQUIRED

- Windows OS
- Maltego installed
- Internet connection
- Maltego account (free)

PROCEDURE

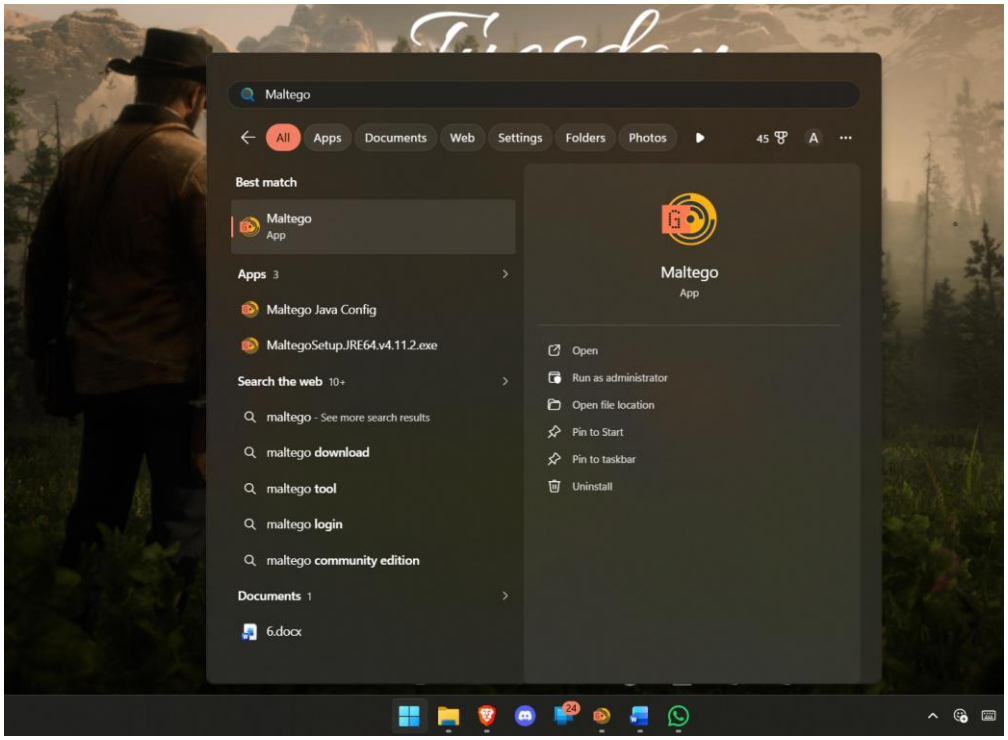
Step 1: Install Maltego

- Download from official website
- Install like a normal Windows application (.exe)



Step 2: Open Maltego

- Click **Start Menu → Search "Maltego" → Open App**

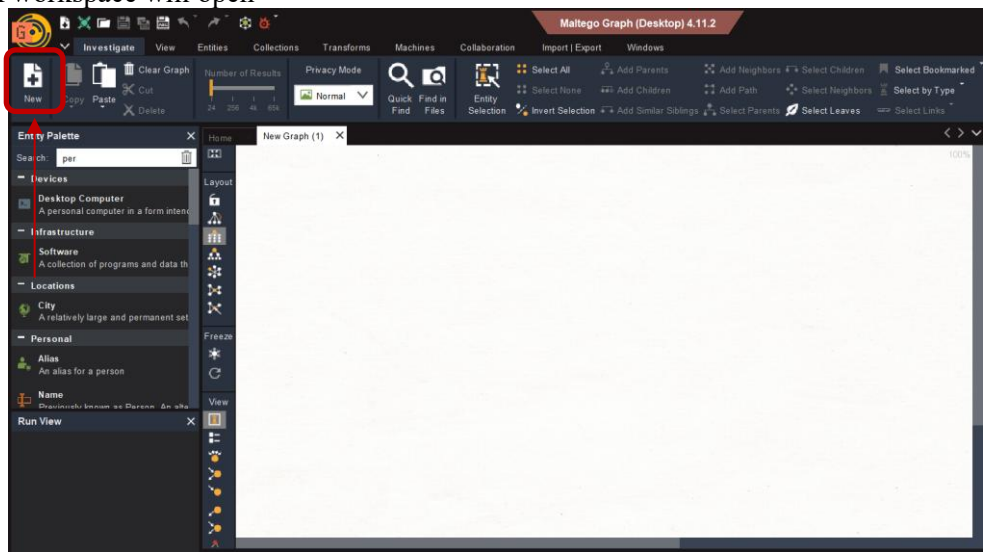


Step 3: Login

- Enter your Maltego account
- Select **Maltego CE (Community Edition)**

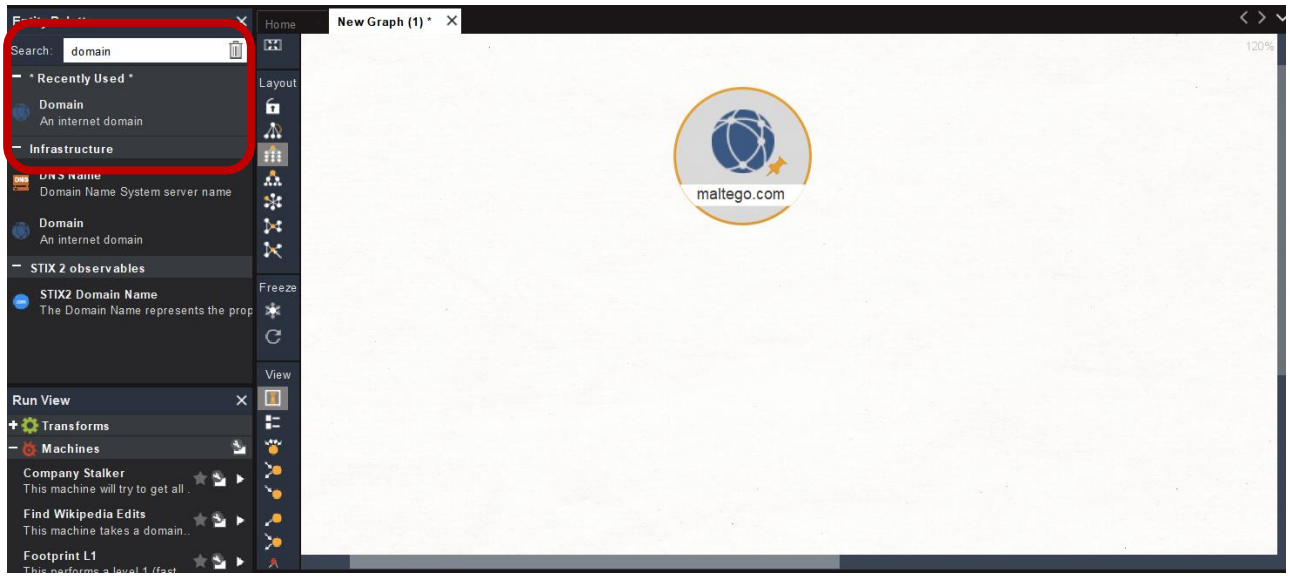
Create New Graph

- Click:
  New → New Graph
- A blank workspace will open



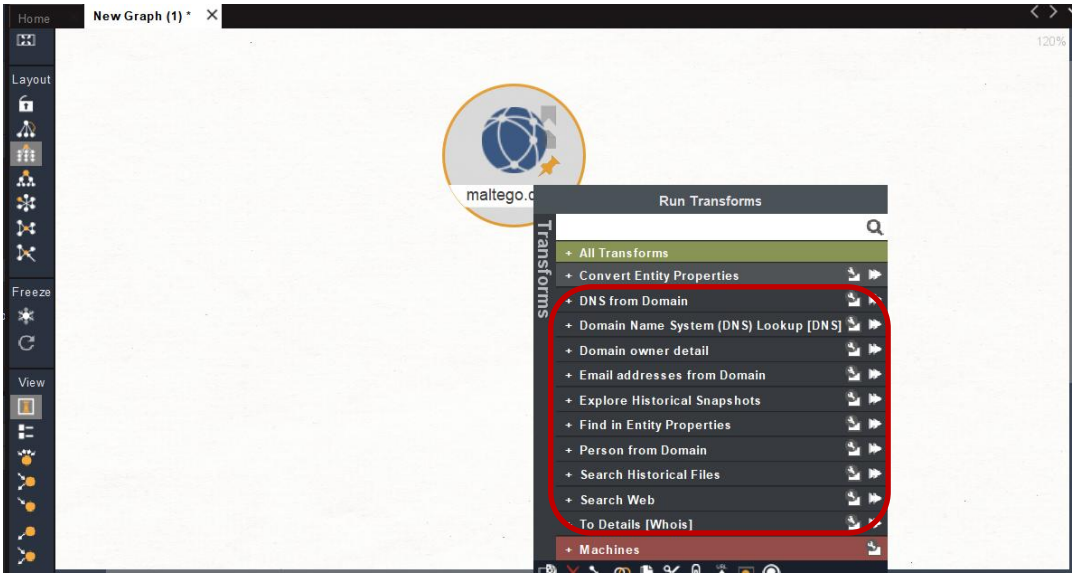
Step 5: Add Entity

- From left sidebar, drag:
  - Domain
  - Email Address
  - Person Name
- Example:
  - Enter example.com in Domain entity



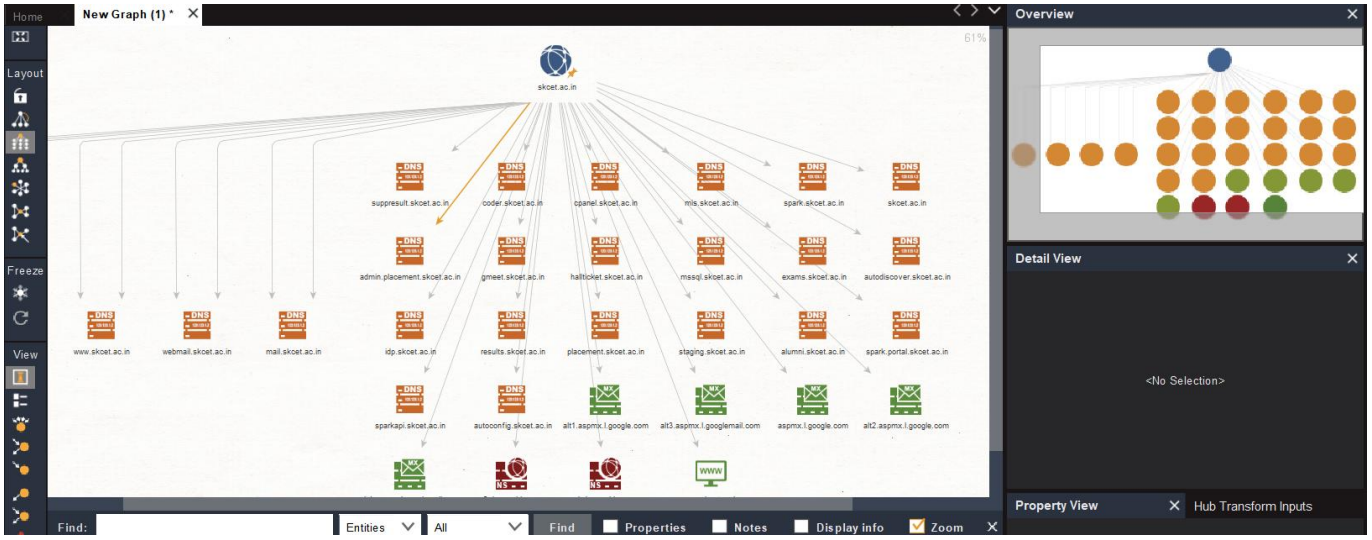
Step 6: Run Transforms

- Right-click the entity
- Click:
  - **Run Transform**
- Choose options like:
  - To DNS Name
  - To IP Address
  - To Email addresses



Step 7: Analyze Output

- Results appear as a **graph**
- You will see:
  - Connected nodes
  - Relationships (domain ↔ IP ↔ email)

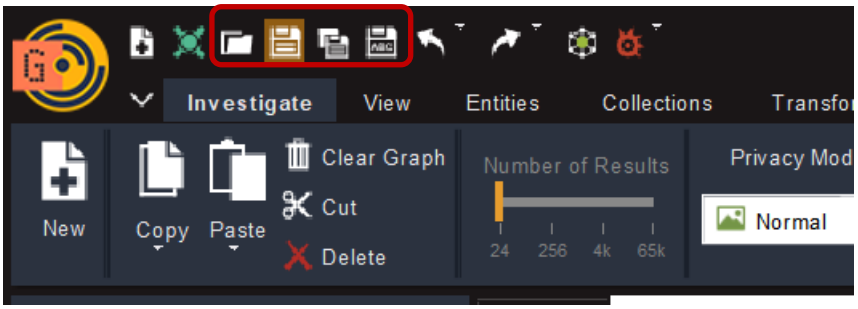


Step 8: Expand Data

- Right-click new nodes
- Run more transforms to gather deeper info

Step 9: Save Project

Click:
File → Save As



Result

Data from public sources was successfully gathered using the Maltego application.
The relationships between domains, IP addresses, and other entities were visualized using graphs.
